4. Styling

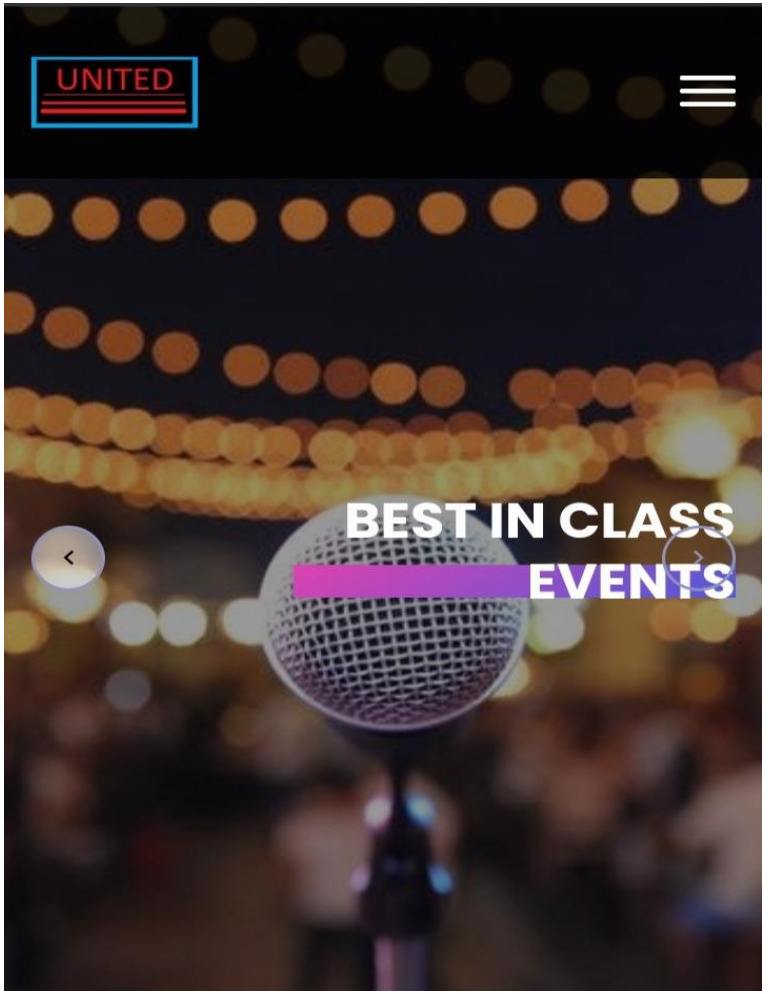
- **WHAT TOOLS WE USE?**

1. CSS
2. Html
3. Javascript
4. Boot strap
5. Visual studio code

- **WEBSITE LINK**
- **BIBLIOGRAPHY**

EVENT MANAGEMENT

Event management is the application of project management to the creation and development of large-scale events such as festivals, conferences, ceremonies, weddings, formal parties, concerts, or conventions. It involves studying the brand, identifying its target audience, devising the event concept, and coordinating the technical aspects before actually launching the event.



WEBPAGES

- There are lot of pages in the website.
- We are made with amazing styling and different font style.
- There are almost 5-6 webpages are linked together in our website such as-
  - Home
  - Event
  - Login
  - Contact
  - About us

ABOUT US :

WHAT WE OFFER

Conference

Marriages

Fests

Birthday

LOGO :

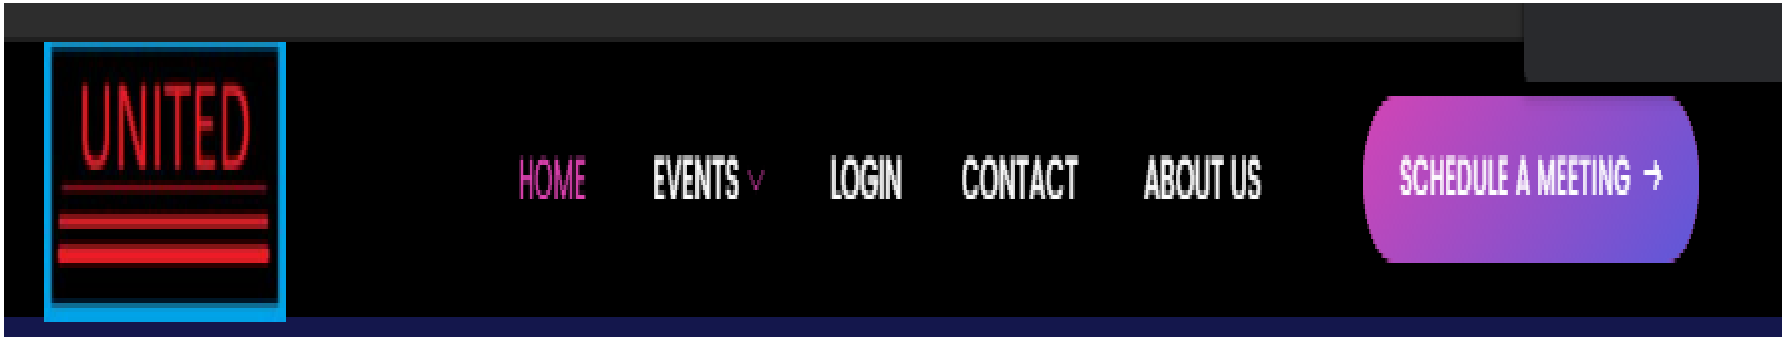
- This is our website logo-

- It is very easy to create a image and use it as a logo by minimise the dimensions of image and put it on the suitable place such as on the

- left side of Google a small log is used.

DETAILS :

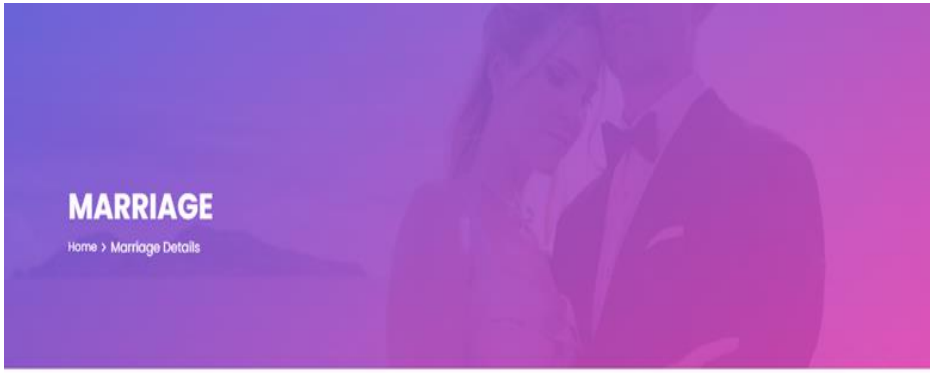
- In every pages we are provided a lot of specific information for better understanding of user.
- Our website is very familiar with user, easy to understand every function such as in the figure.



STYLING

We are trying to style as shown in the figure for our website.

CEREMONY
Home > Ceremony Details



MARRIAGE
Home > Marriage Details

Happy
BIRTHDAY
Home > Birthday Details

TOOLS

- There are too many tools by which we can make any kind of website easily.

We use some tools such as-

- **CSS**: It is the language for describing the presentation of Web pages, including colors, layout, and fonts.
- **HTML**: It allows users to create and structure sections, headings, links, paragraphs, and more, on a website using various tags and elements.

TOOLS

- **XAMPP :** is an abbreviation for cross-platform, Apache, MySQL, PHP and Perl, and it allows you to build WordPress site offline, on a local web **server** on your computer.

- **phpMyAdmin** : is one of the most popular applications for MySQL **database** management. It is a free tool written in PHP. Through this software, you can create, alter, drop, delete, import and export MySQL **database** tables

- **MySQL :** is a database management system. It may be anything from a simple shopping list to a picture gallery or the vast amounts of information in a corporate network. To add, access, and process data stored in a computer database, you need a database management system such as **MySQL** Server.

TOOLS

- **JAVASCRIPT:** It is a text-based programming language used both on the client-side and server-side that allows you to make web pages interactive.

- **Bootstrap:** It is a framework to help you design websites faster and easier. It includes HTML and CSS based design templates for typography, forms, buttons, etc.

- **VISUAL STUDIO CODE:** Visual Studio Code and other text editors are able to interpret file extensions and provide language-specific syntax highlighting.
